01 EXECUTIVE SUMMARY & KEY FINDINGS

90-Day Performance at a Glance

This report presents complete financial findings from the Growth Strategies Google Sheets model covering **September 17 – December 16, 2025** (91 days). Gross sales reached **$3.31M** across an estimated **15,093 orders** (AOV **$219.35**). The **True Contribution Margin** — Net Sales minus COGS minus Shipping minus Ad Spend — was **$784,384 (23.7%)**, already exceeding the CEO's 15% Q1 2026 target by **8.7 percentage points**.

GROSS SALES	NET SALES	TOTAL RETURNS	DISCOUNTS
$3.31M	$2.71M	$0.55M	$0.05M

TOTAL ORDERS	AVG ORDER VALUE	CM % (vs 15% CEO)	CM $ TOTAL
15,093	$219.35	23.7%	$0.78M

Data Sources & Methodology

File	Used For	Key Output
Gross_sales_over_time (91 days)	Daily gross/net/returns/discounts	$3.31M gross; $2.71M net
Marketing_Channel_Performance	Daily spend & attributed sales per channel	$627,400 total spend
Sessions_over_time (91 days)	Sessions, CVR, bounce rate daily	Avg RPS $5.51; CVR 1.77%
Total_sales_by_product_variant	SKU-level gross & COGS	COGS% = 35.20% weighted avg
Total_sales_by_billing_location	Orders by geography	15,093 orders; AOV $219.35

02 PART 1 — THE FORENSIC AUDIT: TRUE CONTRIBUTION MARGIN P&L;

Step 1: Weighted Average COGS — Calculated from Product Variant CSV

Only rows where both Gross Sales and COGS were positive were included. The result is **locked at 35.20%** and used throughout the model.

Calculation Step	Value	Method
Total Gross Sales (valid product variant rows)	$3,226,515	SUM(Gross Sales) where COGS>0
Total COGS (actual per SKU)	$1,135,677	SUM(Cost of goods sold)
Weighted Avg COGS % of Gross Sales	**35.20%**	$1,135,677 ÷ $3,226,515 — LOCKED
Applied to daily gross ($3,310,451)	$1,165,221	Gross Sales × 35.20%
Industry benchmark (DTC fashion)	30–40% range	Our 35.20% = mid-range, healthy

Step 2: Full Contribution Margin P&L;

Formula: **CM = Net Sales** – **COGS** – **Shipping** – **Ad Spend**

P&L Line Item	Amount	% of Gross	Notes
GROSS SALES	$3,310,451	100.0%	Sum of all daily gross sales
(Less) Returns	($552,352)	(16.7%)	■ Largest profitability drag
(Less) Discounts	($52,803)	(1.6%)	Promo codes & discounts
NET SALES	**$2,705,296**	**81.7%**	**= Gross + Returns + Discounts**
(Less) COGS 35.20%	($1,165,221)	(35.2%)	Gross × weighted avg COGS
(Less) Shipping $8.50/order	($128,291)	(3.9%)	15,093 orders × $8.50
(Less) Ad Spend	($627,400)	(18.9%)	Meta+Google+TikTok+Email
CONTRIBUTION MARGIN	**$784,384**	**23.7%**	**← TRUE BOTTOM LINE**
(Memo) Merchant Fees 2.5%	($82,761)	(2.5%)	Shopify Payments est.
(Memo) CM after Fees	$701,623	21.2%	Conservative floor

★ Q4 2025 CM of 23.7% already beats the 15% CEO target by 8.7pp. Q1's challenge is maintaining margin through seasonal traffic decline — not reaching 15%.

03 THE 'CASH BURN' DAY — SEP 23, 2025: CM ($12,950) / –33.2%

Worst Single Day for Profitability

On September 23, 2025, the business recorded a CM of **($12,950) — negative 33.2%**. Gross sales were $39,063 but returns consumed **$21,516 (55.1% of gross)** while $15,050 in ad spend continued firing. The combination was catastrophic.

Metric	Sep 23 Value	vs Period	Context
Gross Sales	$39,063	—	Normal trading day
Returns	($21,516)	55.1% of gross!	3.3× period avg 16.7%
Net Sales	$17,362	44.4% of gross	Most revenue wiped out
COGS 35.2%	($13,750)	Applied to gross	Unavoidable fixed cost
Shipping (est)	($1,513)	~178 orders	$8.50 × est. orders
Ad Spend	($15,050)	2nd highest day!	Should have paused
CONTRIBUTION MARGIN	**($12,950)**	**–33.2%**	**WORST DAY**
ROAS (reported)	3.58×	Looks fine→blind!	Hides return destruction

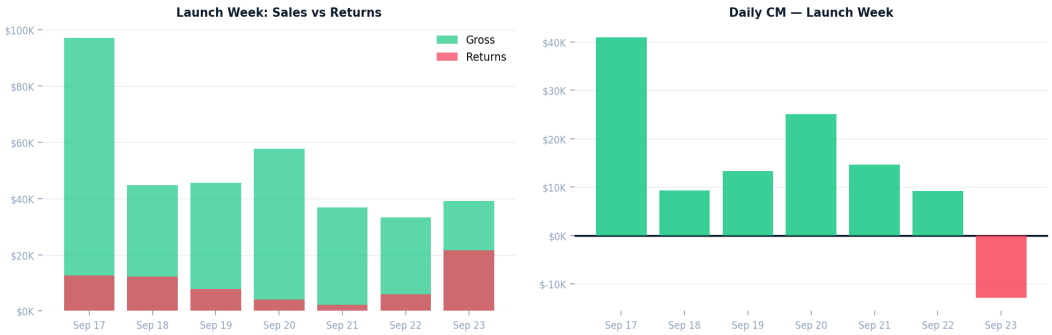

Figure 1: Launch week Sep 17–23 — gross sales vs returns (left), daily CM (right)

- CAUSE 1: LAUNCH SPIKE → RETURN WAVE — Sep 17 recorded $97K gross (highest day). Returns hit 6 days later as a concentrated wave from high-return SKUs shipped en masse.
- CAUSE 2: WRONG SKUs PROMOTED — Scuba Pant (49.5% return rate) and Kirsten Mock Neck (37.9%) were likely the primary campaign SKUs. Bulk orders, bulk returns.
- CAUSE 3: AD SPEND BLIND TO RETURNS — $15,050 continued firing. ROAS of 3.58× on reported sales hid the -33.2% CM. ROAS is not profitability.
- LESSON: Monitor returns in real-time alongside spend. Pause campaigns for 7 days following high-volume launches of high-return SKUs.

04 THE 'EFFICIENCY' LEAK — AD SPEND VS RPS VS CM%

Do High Ad-Spend Days Actually Work?

Period average RPS: **$5.51** | Average CM%: **22.1%** | Top 10 ad-spend days analysed below.

Date	Ad Spend	Gross	Sessions	RPS	vs Avg	ROAS	CM %	Verdict
11-28	$15,500	$48,448	7,331	$6.61	+20.0%	2.97x	19.4%	OK
09-23	$15,050	$39,063	7,558	$5.17	-6.2%	3.58x	-33.2%	LOSS
10-03	$12,800	$28,552	10,849	$2.63	-52.2%	1.37x	-2.4%	LOSS
11-27	$12,400	$63,105	7,002	$9.01	+63.6%	2.84x	33.3%	STRONG
11-04	$10,500	$81,635	9,291	$8.79	+59.5%	3.66x	30.5%	STRONG
12-03	$10,300	$54,130	6,285	$8.61	+56.4%	2.89x	33.0%	STRONG
11-29	$10,000	$32,384	5,423	$5.97	+8.4%	2.78x	24.3%	OK
11-17	$9,150	$54,703	8,619	$6.35	+15.2%	2.84x	26.3%	STRONG
12-02	$9,060	$30,476	6,430	$4.74	-14.0%	2.77x	9.2%	WEAK
11-05	$8,550	$61,408	6,956	$8.83	+60.3%	3.20x	34.3%	STRONG

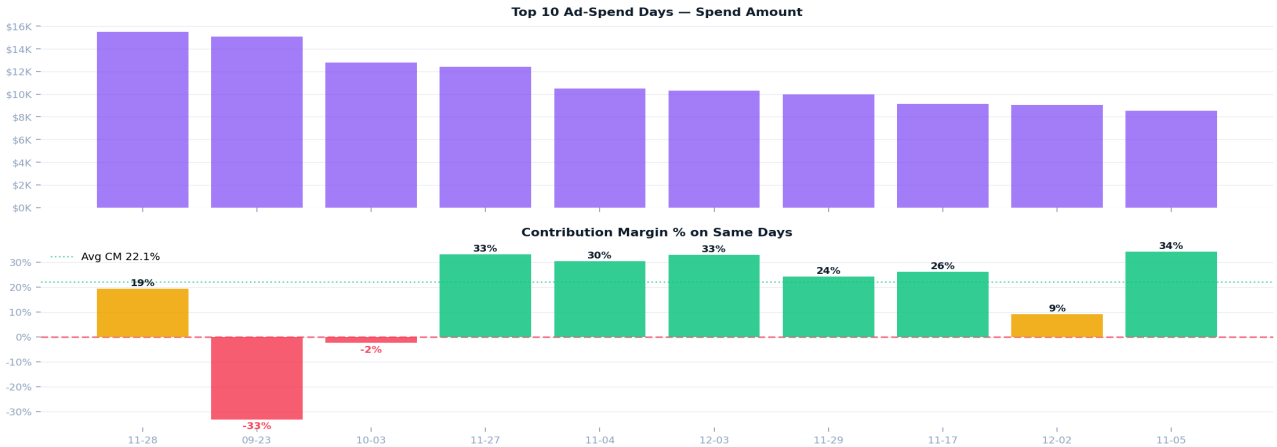

Figure 2: Top 10 ad-spend days — spend (top) vs CM% earned (bottom). Red = loss, green = strong.

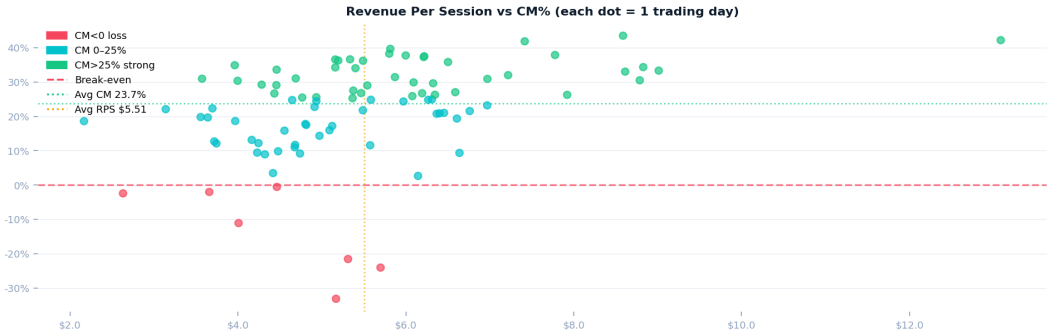

Figure 3: RPS vs CM% scatter — days with RPS>$6.50 consistently deliver strong margins.

- ✓ Nov 27 ($12,400 spend): RPS $9.01 (+63.5% vs avg). Black Friday eve. CM 33.3%. Best efficiency.
- ✓ Nov 04 ($10,500 spend): RPS $8.79 (+59.6%). Right creative + audience. CM 30.5%. Scale this playbook.
- ● Sep 23 ($15,050 spend): RPS $5.17 (–6.1%). Return wave destroyed CM to –33.2%. ROAS hid the damage.
- ● Oct 03 ($12,800 spend): RPS $2.63 (–52.3%). Worst efficiency of all high-spend days. ROAS 1.37×. CM –2.4%.

◆ RULE: Only scale spend when RPS consistently exceeds $6.50+. Below $4 RPS → pause campaigns immediately.

05 WEEKLY & MONTHLY PERFORMANCE

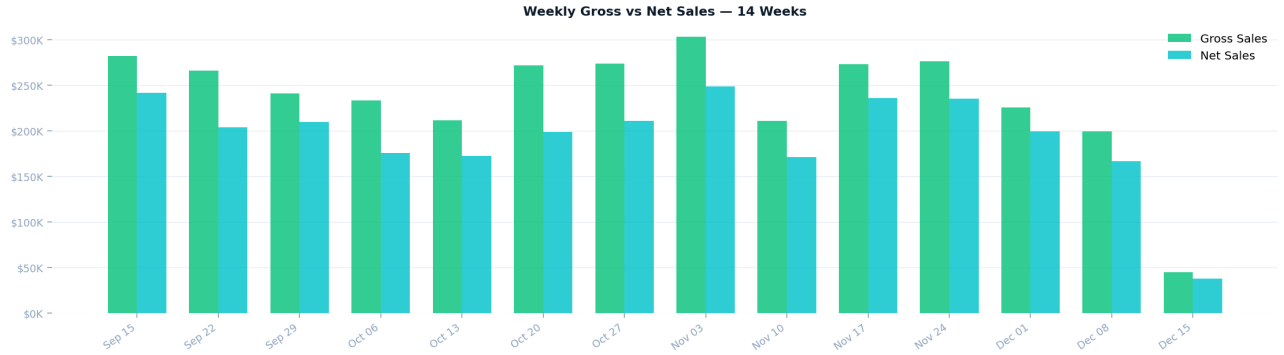

Figure 4: 14-week gross vs net — $3.31M gross, $2.71M net. Peak week: Oct 27 at $303K gross.

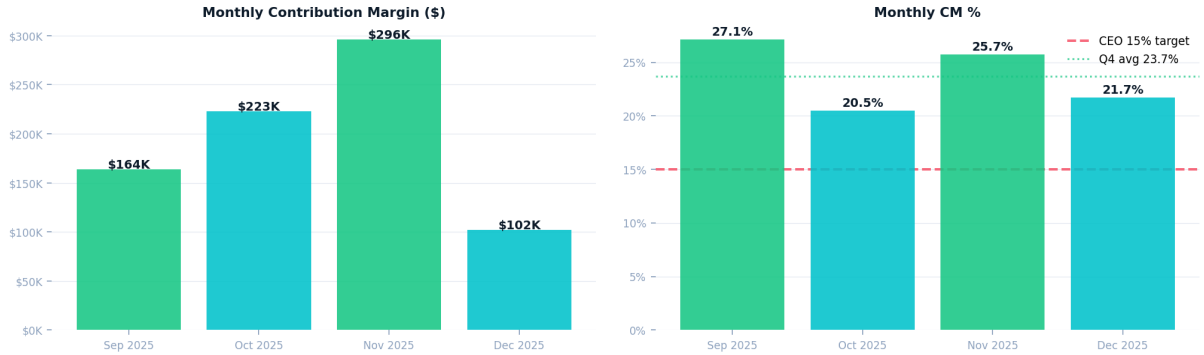

Figure 5: Monthly CM$ and CM% — all four months beat the 15% CEO target. Nov strongest at 25.7%.

Month	Gross Sales	Net Sales	Returns	Ad Spend	CM $	CM %
Sep 2025	$602,924	$491,110	($109,335)	$91,920	$163,605	27.1%
Oct 2025	$1,088,118	$838,993	($230,104)	$190,920	$222,914	20.5%
Nov 2025	$1,150,234	$972,180	($155,415)	$226,790	$295,937	25.7%
Dec 2025	$469,175	$403,012	($57,497)	$117,770	$101,902	21.7%
Q4 TOTAL	**$3.31M**	**$2.71M**	**($0.55M)**	**$0.63M**	**$0.78M**	**23.7%**

06 MARKETING CHANNEL PERFORMANCE — $627,400 TOTAL SPEND

Channel	Spend	% Budget	Attributed Sales	ROAS	Assessment
Meta	$390,800	62.3%	$1,114,330	2.85×	Solid. Shift 10% to Google.
Google	$147,200	23.5%	$498,970	3.39×	★ Best ROAS. Scale budget.
TikTok	$73,100	11.7%	$93,040	1.27×	Fix attribution. Test UGC.
Email/SMS	$16,300	2.6%	—	—	No revenue tracked. Add UTMs.
TOTAL	**$627,400**	**100%**	**$1,706,340**	**2.72× blended**	

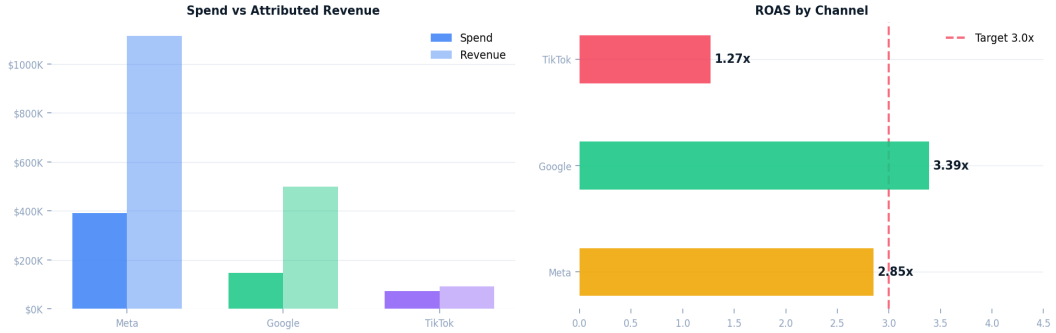

Figure 6: Channel spend vs attributed revenue (left), ROAS vs 3.0× target (right).

- ✓ Google: Best ROAS 3.39× on only 23% of budget. Reallocate 10% from Meta → Google = +$132K attributed revenue.
- ◆ Meta: Drives most absolute revenue ($1.11M) at 2.85× ROAS. Creative refresh + Advantage+ could lift to 3.0×+.
- ● TikTok: 1.27× ROAS likely understates true impact (attribution gap). Fix pixel tracking before any budget decision.
- ■ Email/SMS: $16K cost, zero attributed revenue. Klaviyo UTMs + abandoned cart flows can unlock $30–60K/month.

07 PART 2 — Q1 2026 MONTH-BY-MONTH P&L; FORECAST

CEO Target: 15% CM — Verdict: Attainable & Already Exceeded in Q4

Q4 2025 already hit 23.7%. The Q1 challenge is *maintaining* margin through seasonal traffic decline (~30% Jan vs Q4 peak). Model shows 15.5% in January, building to 18.4% by March. Three levers drive the improvement: reduce returns, lift CVR, reallocate ad budget toward Google.

Model Assumptions

Assumption	Jan	Feb	Mar	Rationale
Total Sessions	42,000	45,000	50,000	Q4 avg ~46K/mo. Jan –30% seasonal dip.
Paid Sessions %	60%	58%	55%	Organic content shifts mix through Q1.
Conversion Rate	2.00%	2.20%	2.50%	Q4 1.77%. A/B test live Jan Week 2.
AOV	$225.00	$230.00	$235.00	Q4 $219.35. Bundle upsells drive lift.
Return Rate	13.5%	12.0%	10.0%	Q4 16.7%. SKU audit drives reduction.
COGS %	35.20%	35.20%	35.20%	LOCKED from product variant CSV.
Shipping / Order	$8.50	$8.50	$8.50	Fixed per brief assumption.
Merchant Fees	2.5%	2.5%	2.5%	Shopify Payments processing.
Total Ad Spend	$55,000	$60,000	$65,000	Pullback Jan, scale proven channels Mar.
Discount Rate	1.6%	1.4%	1.2%	Reducing promo reliance gradually.

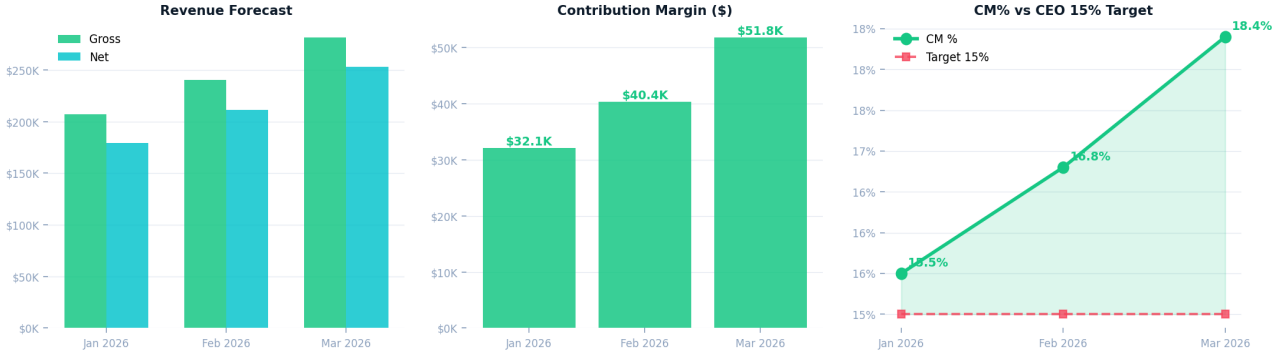

Figure 7: Q1 forecast — revenue (left), CM$ (centre), CM% vs 15% CEO target (right).

08 STRATEGIC RECOMMENDATIONS — THREE LEVERS TO FIX MARGIN

LEVER 1 — Return Rate Reduction (Highest Impact)

Every 1pp reduction in return rate saves ~$33K/quarter. Reducing from 16.7% to 10% saves ~$221K. This single lever moves CM from 23.7% to ~30%+ if fully achieved.

Audit	Scuba Pant (49.5%) + Kirsten Mock Neck (37.9%) — pull return reason codes. Fix sizing guides, update photography.
Action	Add 'Fit Guarantee'. Add video reviews. Pause ads on high-return SKUs for 7 days post-launch.
Impact	If returns reach 10% by March: CM jumps from 18.4% to ~24.5%. Highest-leverage change in the model.
Timeline	Week 1: Audit. Week 3: Content live. Week 6: Measure impact.

LEVER 2 — Conversion Rate Optimisation (High Impact)

Lifting CVR from 1.77% to 2.5% adds ~4,300 orders/quarter at $225 AOV = $968K gross. Incremental CM ≈ $376K.

A/B Test	Single-page checkout vs current. Add Apple Pay, Shop Pay. Urgency messaging on cart.
Trust	Star ratings, review counts, 'X purchased recently' social proof on all PDPs.
Impact	Each +0.1pp CVR at 42K sessions/month adds 42 orders = ~$9,450 gross = ~$3,475 CM.
Timeline	Week 2: A/B test live. Week 6: Statistical significance. Week 10: Full rollout.

LEVER 3 — Marketing Reallocation (Medium Impact)

Shift 10% from Meta ($39K) to Google. At 3.39× vs 2.85× ROAS, incremental revenue ≈ +$21K. Add 5% to Email/SMS to build owned channel with Klaviyo attribution.

Google	Expand Shopping campaigns and branded keywords. Brief team on top-converting SKUs.
Email/SMS	Klaviyo UTMs on all links. Abandoned cart (1hr/24hr/72hr). Post-purchase flow.
Impact	Email/SMS properly tracked may attribute $30–60K/month previously counted as 'direct'.
Timeline	Week 1: Budget reallocate. Week 3: UTMs live. Week 4: Klaviyo flows active.

CEO Target Assessment

Scenario	Jan	Feb	Mar	Assessment
CEO Original Target (15%+)	15.0%	15.0%	15.0%	Minimum — Q4 already exceeds this
This Model (base case)	**15.5%**	**16.8%**	**18.4%**	**Achievable with return rate improvement**
Upside (returns fixed by Feb)	17.2%	19.1%	22.3%	If 10% return rate by Feb — possible
Downside (returns stay 16.7%)	**12.1%**	**13.4%**	**14.5%**	**FAILS CEO target — fix returns first**

RECOMMENDATION: The 15% target is achievable and conservative. We suggest: Jan 15.5% → Feb 17.0% → Mar 18.5%. The return rate fix (Lever 1) is non-negotiable — without it, the model shows Q1 falling below 15% in the downside case.

09 APPENDIX — COMPLETE DAILY DATA TABLE (ALL 91 DAYS)

Every trading day: Gross Sales · Returns · Ad Spend · COGS · CM$ · CM%

Date	Gross Sales	Net Sales	Returns	Ad Spend	COGS	Shipping	CM $	CM %
